RC   STRAIN=Bristol N2;
RA   Waterston R.;
RL   Submitted (MAR-1996) to the EMBL/GenBank/DDBJ databases.
CC   -!- FUNCTION: Sex-determining protein. It is essential for the
CC       adoption of the male sexual fate in all tissues in C.elegans.
CC   -!- SUBCELLULAR LOCATION: Cytoplasmic (Potential).
CC   -!- SIMILARITY: Contains 7 ANK repeats.

RP   CHARACTERIZATION OF VARIANTS GLN-462 AND GLU-541.
RX   MEDLINE=22345000; PubMed=12415269;
RA   Casey G., Neville P.J., Plummer S.J., Xiang Y., Krumroy L.M.,
RA   Klein E.A., Catalona W.J., Nupponen N., Carpten J.D., Trent J.M.,
RA   Silverman R.H., Witte J.S.;
RT   "RNASEL Arg462Gln variant is implicated in up to 13% of prostate
RT   cancer cases.";
RL   Nat. Genet. 32:581-583(2002).
CC   -!- FUNCTION: Endoribonuclease, mediator of interferon action, which
CC       play a role in mediating resistance to virus infection and
CC       apoptosis. Might play a central role in the regulation of mRNA
CC       turnover.
CC   -!- CATALYTIC ACTIVITY: Cleaves 3' of UpNp dimers, with preference for
CC       UU and UA sequences, to sets of discrete products ranging from
CC       between 4 and 22 nucleotides in length.
CC   -!- COFACTOR: Optimal RNA cleavage rates requires the presence of
CC       either manganese or magnesium and ATP.
CC   -!- ENZYME REGULATION: After binding to 2-5A (5'-phosphorylated 2',5'-
CC       linked oligoadenylates) the homodimerization and subsequent
CC       activation occurs. Inhibited by RNase L inhibitor.
CC   -!- SUBUNIT: Monomer (inactive form) or homodimer.
CC   -!- SUBCELLULAR LOCATION: Cytoplasmic and mitochondrial.
CC   -!- TISSUE SPECIFICITY: Highly expressed in spleen and thymus followed
CC       by prostate, testis, uterus, small intestine, colon and peripheral
CC       blood leukocytes.
CC   -!- INDUCTION: By interferons.
CC   -!- DOMAIN: The kinase domain allows the homodimerization.
CC   -!- DOMAIN: The nine ankyrin repeats also called 2-5A sensor
CC       constitute the 2-5A binding domain.
CC   -!- DISEASE: Defects in RNASEL may be the cause of susceptibility to
CC       hereditary prostate cancer 1 (HPC1) [MIM:601518].
CC   -!- SIMILARITY: Contains 9 ANK repeats.

CC   -!- FUNCTION: Histone methyltransferase. Preferentially methylates
CC       Lys-9 of histone H3 and Lys-27 of histone H3 (in vitro). H3 Lys-9
CC       methylation represents a specific tag for epigenetic
CC       transcriptional repression by recruiting HP1 proteins to
CC       methylated histones. Probably targeted to histone H3 by different
CC       DNA-binding proteins like E2F6, MGA, MAX and/or DP1. Also
CC       methylates histone H1 (By similarity).
CC   -!- CATALYTIC ACTIVITY: S-adenosyl-L-methionine + histone L-lysine =
CC       S-adenosyl-L-homocysteine + histone N(6)-methyl-L-lysine.
CC   -!- SUBUNIT: Part of the E2F6.com-1 complex in G0 phase composed of
CC       E2F6, MGA, MAX, TFDP1, CBX3, BAT8, EUHMTASE1, RING1, RNF2, MBLR,
CC       L3MBTL2 and YAF2.
CC   -!- SUBCELLULAR LOCATION: Nuclear; associates with euchromatic
CC       regions. Does not associate with heterochromatin.
CC   -!- ALTERNATIVE PRODUCTS:
CC       Event=Alternative splicing; Named isoforms=3;
CC         Comment=Additional isoforms seem to exist;
CC       Name=1;
CC         IsoId=Q96KQ7-1; Sequence=Displayed;
CC       Name=2; Synonyms=NG36G9a-SPI;
CC         IsoId=Q96KQ7-2; Sequence=VSP_002211;
CC       Name=3; Synonyms=NG36;
CC         IsoId=Q96KQ7-3; Sequence=VSP_002212, VSP_002213;
CC   -!- TISSUE SPECIFICITY: Expressed in all tissues examined, with high
CC       levels in fetal liver, thymus, lymph node, spleen and peripheral
CC       blood leukocytes and lower level in bone marrow.
CC   -!- SIMILARITY: Belongs to the histone-lysine methyltransferase
CC       family. Suvar3-9 subfamily.
CC   -!- SIMILARITY: Contains 7 ANK repeats.
CC   -!- SIMILARITY: Contains 1 pre-SET domain.
CC   -!- SIMILARITY: Contains 1 SET domain.
CC   -!- SIMILARITY: Contains 1 post-SET domain.
CC   -!- CAUTION: NG36 and G9a were originally thought to derive from two
CC       separate genes. Ref.3 shows that all G9A transcripts also contain
CC       the in frame coding sequence of NG36.
CC   -!- CAUTION: Ref.1 and Ref.2 sequences differ from that shown due to
CC       erroneous gene model prediction.
CC   -!- CAUTION: It is not known whether Met-1 or Met-21 is the initiator
CC       methionine.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC   -!- FUNCTION: ANKYRINS ATTACH INTEGRAL MEMBRANE PROTEINS TO CYTO-
CC       SKELETAL ELEMENTS; THEY BIND TO THE ERYTHROCYTE MEMBRANE PROTEIN
CC       BAND 4.2, TO NA-K ATPASE, TO THE LYMPHOCYTE MEMBRANE PROTEIN GP85,
CC       AND TO THE CYTOSKELETAL PROTEINS FODRIN, TUBULIN, VIMENTIN AND
CC       DESMIN. ERYTHROCYTE ANKYRINS ALSO LINK SPECTRIN (BETA CHAIN) TO
CC       THE CYTOPLASMIC DOMAIN OF THE ERYTHROCYTES ANION EXCHANGE PROTEIN;
CC       THEY RETAIN MOST OR ALL OF THESE BINDING FUNCTIONS.
CC   -!- SUBCELLULAR LOCATION: PLASMA-MEMBRANE ASSOCIATED. ISOFORMS 7 AND 8
CC       ARE ASSOCIATED WITH THE LYSOSOMAL MEMBRANE.
CC   -!- ALTERNATIVE PRODUCTS:
CC       Event=Alternative splicing; Named isoforms=8;
CC         Comment=Additional isoforms seem to exist;
CC       Name=1;
CC         IsoId=Q61307-1; Sequence=Displayed;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 10
US-09-972-115A-2
; Sequence 2, Application US/09972115A
; Publication No. US20030032769A1
; GENERAL INFORMATION:
;  APPLICANT: Geron Corporation
;  APPLICANT:  Gregg, Morin B.
;  APPLICANT:  Walter, Funk D.
;  APPLICANT:  Mieczyslaw, Piatyszek A.
;  TITLE OF INVENTION: A Second Mammalian Telomerase
;  FILE REFERENCE: 080/003C
;  CURRENT APPLICATION NUMBER: US/09/972,115A
;  CURRENT FILING DATE:  2001-10-05
;  PRIOR APPLICATION NUMBER: US 60/128,577
;  PRIOR FILING DATE: 2000-04-10
;  PRIOR APPLICATION NUMBER: US 60/129,123
;  PRIOR FILING DATE: 1999-04-13
;  NUMBER OF SEQ ID NOS: 64
;  SOFTWARE: PatentIn version 3.1
; SEQ ID NO 2
;   LENGTH: 1333
;   TYPE: PRT
;   ORGANISM: Homo sapiens
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (1)..(1)
;   OTHER INFORMATION: The 'Xaa' at location 1 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (2)..(2)
;   OTHER INFORMATION: The 'Xaa' at location 2 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (3)..(3)
;   OTHER INFORMATION: The 'Xaa' at location 3 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (4)..(4)
;   OTHER INFORMATION: The 'Xaa' at location 4 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (5)..(5)
;   OTHER INFORMATION: The 'Xaa' at location 5 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (6)..(6)
;   OTHER INFORMATION: The 'Xaa' at location 6 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (7)..(7)
;   OTHER INFORMATION: The 'Xaa' at location 7 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (8)..(8)
;   OTHER INFORMATION: The 'Xaa' at location 8 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (9)..(9)
;   OTHER INFORMATION: The 'Xaa' at location 9 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon, T
;   OTHER INFORMATION: yr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (10)..(10)
;   OTHER INFORMATION: The 'Xaa' at location 10 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (11)..(11)
;   OTHER INFORMATION: The 'Xaa' at location 11 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (12)..(12)
;   OTHER INFORMATION: The 'Xaa' at location 12 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (13)..(13)
;   OTHER INFORMATION: The 'Xaa' at location 13 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (14)..(14)
;   OTHER INFORMATION: The 'Xaa' at location 14 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (15)..(15)
;   OTHER INFORMATION: The 'Xaa' at location 15 stands for Lys, Asn, Arg, Ser, Thr, Ile,
;   OTHER INFORMATION: Met, Glu, Asp, Gly, Ala, Val, Gln, His, Pro, Leu, a stop codon,
;   OTHER INFORMATION: Tyr, Trp, Cys, or Phe.
;   NAME/KEY: misc_feature
;   LOCATION: (16)..(16)

; Sequence 2, Application US/09841835
; Patent No. US20020076795A1
; GENERAL INFORMATION:
; APPLICANT: de Lange, Titia
; APPLICANT: Smith, Susan
; TITLE OF INVENTION: A PROTEIN THAT BINDS TO TRF1 AND METHODS
; TITLE OF INVENTION: OF USE THEREOF
; NUMBER OF SEQUENCES: 12
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: Klauber & Jackson
; STREET: 411 Hackensack Avenue, 4th Floor
; CITY: Hackensack
; STATE: New Jersey
; COUNTRY: USA
; ZIP: 07601
; COMPUTER READABLE FORM:
; MEDIUM TYPE: Floppy disk
; COMPUTER: IBM PC compatible
; OPERATING SYSTEM: PC-DOS/MS-DOS
; SOFTWARE: PatentIn Release #1.0, Version #1.30
; CURRENT APPLICATION DATA:
; APPLICATION NUMBER: US/09/841,835
; FILING DATE:
; CLASSIFICATION:
; PRIOR APPLICATION DATA:
; APPLICATION NUMBER: 09/196,387
; FILING DATE:
; ATTORNEY/AGENT INFORMATION:
; NAME: Jackson Esq., David A.
; REGISTRATION NUMBER: 26,742
; REFERENCE/DOCKET NUMBER: 600-1-230 CIP1
; TELECOMMUNICATION INFORMATION:
; TELEPHONE: 201-487-5800
; TELEFAX: 201-343-1684
; TELEX: 133521
; INFORMATION FOR SEQ ID NO: 2:
; SEQUENCE CHARACTERISTICS:
; LENGTH: 1327 amino acids
; TYPE: amino acid
; STRANDEDNESS: single
; TOPOLOGY: linear
; MOLECULE TYPE: protein
; HYPOTHETICAL: NO

RESULT 4
US-09-350-982C-4
; Sequence 4, Application US/09350982C
; Patent No. 6455290
; GENERAL INFORMATION:
;  APPLICANT:  Berthelsen, Jens
;  APPLICANT:  Toma, Salvatore
;  APPLICANT:  Isacchi, Antonella
;  TITLE OF INVENTION:  Tankyrase Homolog Protein(THP), Nucleic Acids, and Methods Rela
;  TITLE OF INVENTION:  Same
;  FILE REFERENCE:  PHRM-0043
;  CURRENT APPLICATION NUMBER: US/09/350,982C
;  CURRENT FILING DATE:  1999-07-09
;  NUMBER OF SEQ ID NOS:  10
;  SOFTWARE:  PatentIn version 3.0
; SEQ ID NO 4
;  LENGTH: 3498
;  TYPE: DNA
;  ORGANISM: Artificial
;  FEATURE:
;  OTHER INFORMATION: PCR Primers
;  NAME/KEY: CDS
;  LOCATION: (1)..(3498)
;  NAME/KEY: misc_feature
;  OTHER INFORMATION: Xaa is any amino acid
;  NAME/KEY: misc_feature
;  LOCATION: (1102)..(1102)
;  OTHER INFORMATION: n is any nucleic acid
;  NAME/KEY: misc_feature
;  LOCATION: (2650)..(2650)
;  OTHER INFORMATION: n is any nucleic acid
US-09-350-982C-4

RESULT 3
US-09-350-982C-3
; Sequence 3, Application US/09350982C
; Patent No. 6455290
; GENERAL INFORMATION:
; APPLICANT: Berthelsen, Jens
; APPLICANT: Toma, Salvatore
; APPLICANT: Isacchi, Antonella
; TITLE OF INVENTION: Tankyrase Homolog Protein(THP), Nucleic Acids, and Methods Rela
; TITLE OF INVENTION: Same
; FILE REFERENCE: PHRM-0043
; CURRENT APPLICATION NUMBER: US/09/350,982C
; CURRENT FILING DATE: 1999-07-09
; NUMBER OF SEQ ID NOS: 10
; SOFTWARE: PatentIn version 3.0
; SEQ ID NO 3
; LENGTH: 4512
; TYPE: DNA
; ORGANISM: Artificial
; FEATURE:
; OTHER INFORMATION: PCR Primers
; NAME/KEY: misc_feature
; LOCATION: (1124)..(1124)
; OTHER INFORMATION: n is any nucleic acid
; NAME/KEY: misc_feature
; LOCATION: (2672)..(2672)
; OTHER INFORMATION: n is any nucleic acid
US-09-350-982C-3

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC   given in the specification (including its fragment or variant), a vector
CC   comprising the SID (RTM) polynucleotide, a recombinant host cell
CC   comprising the vector, a protein chip comprising the polypeptides and a
CC   record comprising all or part of the data, listed in the specification.
CC   The complex, polypeptides, polynucleotides and compounds are useful for
CC   preventing or treating metabolic disorders such as obesity or diabetes.
CC   The polynucleotides are useful as probes or primers. The complex is
CC   particularly useful for identifying selected interacting domains (SID
CC   (RTM)) for screening drugs that modulate the protein interaction, thus
CC   exhibiting the therapeutic effect. The present sequence represents a SID
CC   (prey) protein of the invention

PT   Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT   length cDNAs defined in the specification, and for the detection and/or
PT   diagnosis of the abnormality of the proteins encoded by the full-length
PT   cDNAs.
XX
PS   Claim 8; SEQ ID NO 15733; 2537pp + Sequence Listing; English.
XX
CC   The present invention describes primer sets for synthesising 5602 full-
CC   length cDNAs defined in the specification. Where a primer set comprises:
CC   (a) an oligo-dT primer and an oligonucleotide complementary to the
CC   complementary strand of a polynucleotide which comprises one of the 5602
CC   nucleotide sequences defined in the specification, where the
CC   oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC   of an oligonucleotide comprising a sequence complementary to the
CC   complementary strand of a polynucleotide which comprises a 5'-end
CC   sequence and an oligonucleotide comprising a sequence complementary to a
CC   polynucleotide which comprises a 3'-end sequence, where the
CC   oligonucleotide comprises at least 15 nucleotides and the combination of
CC   the 5'-end sequence/3'-end sequence is selected from those defined in the
CC   specification. The primer sets can be used in antisense therapy and in
CC   gene therapy. The primers are useful for synthesising polynucleotides,
CC   particularly full-length cDNAs. The primers are also useful for the
CC   detection and/or diagnosis of the abnormality of the proteins encoded by
CC   the full-length cDNAs. The primers allow obtaining of the full-length
CC   cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC   AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC   represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC   oligonucleotides, all of which are used in the exemplification of the
CC   present invention

PT Diagnosing disorder characterized by expression of human cancer
PT associated antigen precursor, involves detecting interaction of an agent
PT with novel NA Group 1 nucleic acid molecule encoding the antigen
PT precursor.
XX
PS Example 1; Page 78-79; 87pp; English.
XX
CC The present sequence is given in a specification relating to nucleic
CC acids and encoded polypeptides which are cancer associated antigens
CC expressed in patients afflicted with breast cancer and/or T cell
CC leukaemia. A disorder characterised by expression of human cancer
CC associated antigen may be diagnosed by contacting a biological sample
CC with an agent that specifically binds to the nucleic acid that encodes
CC the antigen, complexed with human leukocyte antigen molecule, and
CC determining the interaction between the agent and the nucleic acid.
CC Cancer associated antigens, the nucleotides encoding them, antibodies
CC against them and the pharmaceutical compositions comprising them are
CC useful for diagnosing, monitoring and treating the diseases characterised
CC by the expression of one or more cancer associated antigens

PT New complex between two interacting proteins in adipocyte cells, useful
PT for identifying selected interacting domains that modulate protein
PT interactions, or for preventing or treating metabolic disorders such as
PT obesity or diabetes.
XX
PS Claim 6; Page 279; 382pp; English.
XX
CC The invention relates to a complex between two interacting proteins in
CC adipocyte cells, given in the specification. The proteins are identified
CC by selecting a bait protein from a known adipocyte marker and then
CC performing a yeast 2-hybrid selection to isolate prey proteins encoded by
CC members of an adipocyte cDNA library. The proteins are designated SID
CC (RTM) (selected interacting domains) proteins. Also included are a
CC polynucleotide encoding a polypeptide in the adipocyte cells, a
CC recombinant host cell expressing at least one of the interacting
CC polypeptides of the complex, selecting a modulating compound in adipocyte
CC cells, a SID (RTM)) polypeptide comprising any of the 738 amino acid
CC sequences given in the specification (including its fragment or variant),
CC a SID (RTM) polynucleotide comprising any of the 738 nucleotide sequences

PT Nuclear localization signal (NLS)-tankyrase, for identifying modulators
PT to treat cancer, comprises NLS and a portion of tankyrase, that retains
PT ability to bind telomeric repeat binding protein 1 and NAD+-dependent ADP
PT -ribosylation activity.
XX
PS Disclosure; Page 138-140; 151pp; English.
XX
CC The invention discloses a nuclear localisation signal (NLS)-telomeric
CC protein tankyrase that comprises a NLS and at least a portion of a
CC tankyrase, that retains ability to bind telomeric, TTAGGG, repeat binding
CC factor 1 (TRF1) and its NAD+-dependent ADP-ribosylation activity.
CC Tankyrases (TRF1 interacting ankyrins) bind to the telomeric protein
CC TRF1, which is a negative regulator of telomere length maintenance, and
CC in so doing, counteracts its effect and play a role in lifecycle of a
CC cell. The protein is useful for identifying agents that modulate the
CC binding of TRF1 to its DNA binding site, for identifying agents that
CC modulate the effect of tankyrase on TRF1 in the nucleus of a cell, for
CC identifying the agents that modulate telomere length and for identifying
CC agents that modulate the tankyrase-dependent ADP-ribosylation of TRF1 in
CC the nucleus of a cell. An agent that inhibits ADP-ribosylation of TRF1
CC would hinder telomere lengthening and so is useful in the treatment of
CC cancer. A modulator which promotes ADP ribosylation of TRF1 would enhance
CC telomere lengthening and so could be useful for extending the lifetime of
CC the cell, especially self-renewing cells such as bone marrow cells,
CC peripheral blood, T and B cells. Tankyrases are also useful for
CC developing drugs that can counteract the telomere shortening associated
CC with aging and certain diseases such as ataxia telangiectasia. The
CC protein sequence presented is the truncated human tankyrase #1. Note:
CC Residues 1-640 are the same as the wild-type human tankyrase sequence

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 6; Page 228-229; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PS Disclosure; Page 121-123; 133pp; English.
XX
CC The present sequence is truncated human tankyrase, a TRF1 (telomeric
CC repeat binding factor-1) binding protein. This comprises 1-640 residues
CC of human tankyrase. Tankyrase is involved in regulation of telomere
CC length through TRF1 and may directly modulate the effect of TRF1.
CC Recombinant tankyrase, or its fragments are used to identify specific
CC modulators which are potential drugs for countering telomere shortening
CC associated with aging (e.g. atrophy of skin, macular degeneration or
CC atherosclerosis) or diseases like ataxia telangiectasia. They are also
CC used to raise specific antibodies (used as immunoassay reagents and as
CC modulators of tankyrase activity) and in rational drug design

PT   New complex between two interacting proteins in adipocyte cells, useful
PT   for identifying selected interacting domains that modulate protein
PT   interactions, or for preventing or treating metabolic disorders such as
PT   obesity or diabetes.
XX
PS   Claim 6; Page 276; 382pp; English.
XX
CC   The invention relates to a complex between two interacting proteins in
CC   adipocyte cells, given in the specification. The proteins are identified
CC   by selecting a bait protein from a known adipocyte marker and then
CC   performing a yeast 2-hybrid selection to isolate prey proteins encoded by
CC   members of an adipocyte cDNA library. The proteins are designated SID
CC   (RTM) (selected interacting domains) proteins. Also included are a
CC   polynucleotide encoding a polypeptide in the adipocyte cells, a
CC   recombinant host cell expressing at least one of the interacting
CC   polypeptides of the complex, selecting a modulating compound in adipocyte
CC   cells, a SID (RTM)) polypeptide comprising any of the 738 amino acid
CC   sequences given in the specification (including its fragment or variant),
CC   a SID (RTM) polynucleotide comprising any of the 738 nucleotide sequences
CC   given in the specification (including its fragment or variant), a vector
CC   comprising the SID (RTM) polynucleotide, a recombinant host cell
CC   comprising the vector, a protein chip comprising the polypeptides and a
CC   record comprising all or part of the data, listed in the specification.
CC   The complex, polypeptides, polynucleotides and compounds are useful for
CC   preventing or treating metabolic disorders such as obesity or diabetes.
CC   The polynucleotides are useful as probes or primers. The complex is
CC   particularly useful for identifying selected interacting domains (SID
CC   (RTM)) for screening drugs that modulate the protein interaction, thus
CC   exhibiting the therapeutic effect. The present sequence represents a SID
CC   (prey) protein of the invention

PT   Diagnosing disorder characterized by expression of human cancer
PT   associated antigen precursor, involves detecting interaction of an agent
PT   with novel NA Group 1 nucleic acid molecule encoding the antigen
PT   precursor.
XX
PS   Example 1; Page 75-76; 87pp; English.
XX
CC   The present sequence is given in a specification relating to nucleic
CC   acids and encoded polypeptides which are cancer associated antigens
CC   expressed in patients afflicted with breast cancer and/or T cell
CC   leukaemia. A disorder characterised by expression of human cancer
CC   associated antigen may be diagnosed by contacting a biological sample
CC   with an agent that specifically binds to the nucleic acid that encodes
CC   the antigen, complexed with human leukocyte antigen molecule, and
CC   determining the interaction between the agent and the nucleic acid.
CC   Cancer associated antigens, the nucleotides encoding them, antibodies
CC   against them and the pharmaceutical compositions comprising them are
CC   useful for diagnosing, monitoring and treating the diseases characterised
CC   by the expression of one or more cancer associated antigens

PT   New tankyrase2 polypeptides, useful for treating conditions mediated by
PT   poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT   inflammatory and autoimmune disorders.
XX
PS   Example 7; Page 236-239; 242pp; English.
XX
CC   The present invention provides the protein and coding sequence for the
CC   human tankyrase2 protein. This is found in two different versions,
CC   designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC   ribosylation activity and is involved in the modification of TRF1, which
CC   is a telomere-specific binding protein. The regulation of telomere
CC   length, in which TRF1 has a role, is linked to ageing and cancer. The
CC   sequences are useful in the treatment of cancers and inflammatory
CC   disorders

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 1; Page 156-157; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT Human proteins and DNA encoding sequences useful for preventing, treating
PT or ameliorating a medical condition in a mammalian subject e.g. arthritis
PT and cancer.
XX
PS Claim 20; Page 165-166; 1963pp; English.
XX
CC Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and
CC sequences ABA08225-ABA09574 represent nucleic acids encoding them. The
CC invention also relates to vectors and recombinant host cells comprising a
CC nucleotide of the invention, methods of producing the novel polypeptides,
CC antibodies against the polypeptides, methods of detecting the nucleotides
CC or polypeptides in a sample, and methods of identifying compounds which
CC bind to polypeptides of the invention. Although novel, many of the
CC polypeptides of the invention have homology to known proteins, thereby
CC giving an insight into their probable biological activities, and hence
CC potential therapeutic applications. The polypeptides of the invention may
CC have various activities, including cytokine, cell proliferation or cell
CC differentiation activities; stem cell growth factor activity;
CC haematopoiesis regulatory activity; tissue growth activity;
CC immunomodulatory activity; activin- or inhibin-related activities;
CC chemotactic or chemokinetic activities; haemostatic, thrombotic or
CC thrombolytic activities; receptor or ligand activities; or may be
CC involved in oncogenesis, cancer cell proliferation or metastasis.
CC Depending on their biological activities, polypeptides and nucleotides of
CC the invention are useful for preventing, treating or ameliorating medical
CC conditions, e.g., by protein or gene therapy. Such conditions include
CC cancers, haematopoietic disorders (e.g.,myeloid or lymphoid cell
CC disorders), chronic inflammatory conditions (e.g., asthma or arthritis),
CC proliferative retinopathy, atherosclerosis, coronary heart disease,
CC arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal
CC vascular growth. Polypeptides involved with tissue regeneration and
CC repair (or nucleic acids encoding them) may be used to promote wound
CC healing (e.g., of burns, incisions and ulcers), while those with
CC immunomodulatory activities may be used in the treatment of viral,
CC bacterial and fungal infections in addition to immune disorders.
CC Polypeptides with growth factor activity may be used in cell cultures to
CC promote cell growth. For example, such polypeptides may be used to
CC manipulate stem cells in culture to give rise to neuroepithelial cells
CC that can be used to augment or replace cells damaged by illness,
CC autoimmune disease or accidental damage. The polypeptides and nucleotides
CC may also be used in the diagnosis of the above conditions, and in drug
CC screening techniques. The present sequence represents a novel human

PT   New recombinant nucleic acid encoding a cell cycle protein, useful for
PT   diagnosing and treating a cell cycle related disorder, e.g. cancer.
XX
PS   Disclosure; Fig 16A-C; 90pp; English.
XX
CC   This invention describes a novel recombinant nucleic acid encoding the
CC   cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC   invention have cytostatic and immunostimulant activity and can be used
CC   for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC   nucleic acid encoding the protein are useful for diagnosing and treating
CC   a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC   tumour cell. The methods are useful for screening for a bioactive agent
CC   capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC   agent capable of modulating a cell cycle protein tankyrase H or PARP
CC   (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC   inducing an immune response against the cell cycle proteins. This
CC   sequence represents the tankyrase H isoform TH-1 variant TaHo C which
CC   contains a C-terminus deletion and a 28 amino acid insertion due to a
CC   frame shift described in the disclosure of the invention

PT Nuclear localization signal (NLS)-tankyrase, for identifying modulators
PT to treat cancer, comprises NLS and a portion of tankyrase, that retains
PT ability to bind telomeric repeat binding protein 1 and NAD+-dependent ADP
PT -ribosylation activity.
XX
PS Disclosure; Page 146-148; 151pp; English.
XX
CC The invention discloses a nuclear localisation signal (NLS)-telomeric
CC protein tankyrase that comprises a NLS and at least a portion of a
CC tankyrase, that retains ability to bind telomeric, TTAGGG, repeat binding
CC factor 1 (TRF1) and its NAD+-dependent ADP-ribosylation activity.
CC Tankyrases (TRF1 interacting ankyrins) bind to the telomeric protein
CC TRF1, which is a negative regulator of telomere length maintenance, and
CC in so doing, counteracts its effect and play a role in lifecycle of a
CC cell. The protein is useful for identifying agents that modulate the
CC binding of TRF1 to its DNA binding site, for identifying agents that
CC modulate the effect of tankyrase on TRF1 in the nucleus of a cell, for
CC identifying the agents that modulate telomere length and for identifying
CC agents that modulate the tankyrase-dependent ADP-ribosylation of TRF1 in
CC the nucleus of a cell. An agent that inhibits ADP-ribosylation of TRF1
CC would hinder telomere lengthening and so is useful in the treatment of
CC cancer. A modulator which promotes ADP ribosylation of TRF1 would enhance
CC telomere lengthening and so could be useful for extending the lifetime of
CC the cell, especially self-renewing cells such as bone marrow cells,
CC peripheral blood, T and B cells. Tankyrases are also useful for
CC developing drugs that can counteract the telomere shortening associated
CC with aging and certain diseases such as ataxia telangiectasia. The
CC protein sequence presented is the truncated human tankyrase #2. Note:
CC Residues 1-881 are the same as the wild-type human tankyrase sequence

PT   New nucleic acid encoding vertebrate tankyrase, a regulator of telomere
PT   length, used to identify modulators, e.g. for inhibiting growth of
PT   cancer.
XX
PS   Disclosure; Page 125-129; 133pp; English.
XX
CC   The present sequence is truncated human tankyrase, a TRF1 (telomeric
CC   repeat binding factor-1) binding protein. This comprises 1-881 residues
CC   of human tankyrase. Tankyrase is involved in regulation of telomere
CC   length through TRF1 and may directly modulate the effect of TRF1.
CC   Recombinant tankyrase, or its fragments are used to identify specific
CC   modulators which are potential drugs for countering telomere shortening
CC   associated with aging (e.g. atrophy of skin, macular degeneration or
CC   atherosclerosis) or diseases like ataxia telangiectasia. They are also
CC   used to raise specific antibodies (used as immunoassay reagents and as
CC   modulators of tankyrase activity) and in rational drug design

PT   New transgenic fly, containing DNA encoding an Abeta portion of human
PT   APP, useful for identifying agents which modulate the APP pathway and
PT   which can be used to treat Alzheimer's disease.
XX
PS   Example 4; Page 113-114; 129pp; English.
XX
CC   The invention relates to a transgenic fly whose genome comprises DNA
CC   encoding a polypeptide having the Abeta portion of human amyloid
CC   precursor protein (APP), fused to a signal sequence. The DNA sequence
CC   encodes a 123 (Abeta40) or 129 (Abeta42) amino acid sequence, given in
CC   the specification. The DNA sequence is operably linked to a tissue-
CC   specific expression control sequence. Expression of the sequence gives
CC   the fly an altered phenotype. The purpose of the invention is for
CC   identifying agents that inhibit or promote the expression and/or function
CC   of genes or encoded polypeptides which modify the APP pathway. The agent
CC   is a compound, triple helix DNA, antisense oligonucleotide, double
CC   stranded RNA molecule, ribozyme, or particularly an antibody. It is used
CC   to treat conditions such as Alzheimer's disease. The agent can be used as
CC   an APP pathway modulator or in gene therapy. This sequence represents the
CC   protein of the APP related human homologue hCP33787

PT   New tankyrase2 polypeptides, useful for treating conditions mediated by
PT   poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT   inflammatory and autoimmune disorders.
XX
PS   Example 2; Page 215-218; 242pp; English.
XX
CC   The present invention provides the protein and coding sequence for the
CC   human tankyrase2 protein. This is found in two different versions,
CC   designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC   ribosylation activity and is involved in the modification of TRF1, which
CC   is a telomere-specific binding protein. The regulation of telomere
CC   length, in which TRF1 has a role, is linked to ageing and cancer. The
CC   sequences are useful in the treatment of cancers and inflammatory
CC   disorders

PT New isolated nucleic acid detection reagent for detecting 1000 or more
PT genes from Drosophila and for elucidating cell signaling and cell-cell
PT interactions.
XX
PS Disclosure; SEQ ID NO 9474; 21pp + Sequence Listing; English.
XX
CC The invention relates to an isolated nucleic acid detection reagent
CC capable of detecting 1000 or more genes from Drosophila. The invention is
CC useful in developmental biology and in elucidating cell signalling and
CC cell-cell interactions in higher eukaryotes for the development of
CC insecticides, therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC ABB72072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 1; Page 144-146; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT Diagnosing disorder characterized by expression of human cancer
PT associated antigen precursor, involves detecting interaction of an agent
PT with novel NA Group 1 nucleic acid molecule encoding the antigen
PT precursor.
XX
PS Example 8; Page 84-86; 87pp; English.
XX
CC The present sequence is given in a specification relating to nucleic
CC acids and encoded polypeptides which are cancer associated antigens
CC expressed in patients afflicted with breast cancer and/or T cell
CC leukaemia. A disorder characterised by expression of human cancer
CC associated antigen may be diagnosed by contacting a biological sample
CC with an agent that specifically binds to the nucleic acid that encodes
CC the antigen, complexed with human leukocyte antigen molecule, and
CC determining the interaction between the agent and the nucleic acid.
CC Cancer associated antigens, the nucleotides encoding them, antibodies
CC against them and the pharmaceutical compositions comprising them are
CC useful for diagnosing, monitoring and treating the diseases characterised
CC by the expression of one or more cancer associated antigens

PT   New insulin signaling protein SPANK, useful for reducing body mass,
PT   glucose intolerance or insulin resistance and for preventing or treating
PT   obesity-related and muscle-related diseases.
XX
PS   Claim 3; Fig 5B; 65pp; English.
XX
CC   This sequence represents the mouse SPANK protein. The SPANK protein
CC   comprises 3 domains: (a) a SAM (sterile alpha motif) domain; (b) a PARP
CC   (poly adenosine diphosphate-ribose polymerase) catalytic domain; and (c)
CC   an ANK domain composed of ankyrin repeats. SPANK is a cytosolic protein
CC   which can poly(ADP-ribosyl)ate itself. SPANK binds insulin-responsive
CC   aminopeptidase (IRAP) and modulates translocation of GLUT4 in the
CC   perinuclear region of adipocytes. It is an effector in the insulin
CC   signalling pathway in eukaryotic cells. SPANK is useful for reducing body
CC   mass, reducing glucose intolerance or insulin resistance, for preventing
CC   or treating obesity-related diseases or disorders, such as obesity,
CC   cardiac insufficiency, coronary insufficiency, stroke, hypertension,
CC   atheromatous disease, atherosclerosis, high blood pressure, non-insulin
CC   dependent diabetes, hyperlipidaemia, hyperuricemia and Syndrome X and is
CC   also useful for preventing or treating muscle-related diseases or
CC   disorders, such as muscular dystrophy, muscle atrophy and muscle fatigue.
CC   Antibodies immunospecific for SPANK are useful for detecting the presence
CC   of SPANK polypeptide in a biological sample

PT   Novel mammalian Tankyrase II polypeptide and the polynucleotide encoding
PT   the polypeptide useful for modulating or maintaining telomere length,
PT   replicative capacity, apoptosis, chromosome packing or gene expression.
XX
PS   Disclosure; Fig 3; 52pp; English.
XX
CC   The present sequence is a version of the human tankyrase II protein
CC   sequence. The protein is thought to be involved in signal transduction in
CC   the cell, and to have binding activity for other telomere-associated
CC   proteins. It is possible that it plays a role in the regulation of
CC   telomere length, thus affecting the replicative ability of the cell. The
CC   protein is useful for ribosylating target proteins, for determining
CC   tankyrase II binding activity in a sample, and for modulating telomere
CC   length in a cell

PT Nuclear localization signal (NLS)-tankyrase, for identifying modulators
PT to treat cancer, comprises NLS and a portion of tankyrase, that retains
PT ability to bind telomeric repeat binding protein 1 and NAD+-dependent ADP
PT -ribosylation activity.
XX
PS Claim 3; Fig 1B; 151pp; English.
XX
CC The invention discloses a nuclear localisation signal (NLS)-telomeric
CC protein tankyrase that comprises a NLS and at least a portion of a
CC tankyrase, that retains ability to bind telomeric, TTAGGG, repeat binding
CC factor 1 (TRF1) and its NAD+-dependent ADP-ribosylation activity.
CC Tankyrases (TRF1 interacting ankyrins) bind to the telomeric protein
CC TRF1, which is a negative regulator of telomere length maintenance, and
CC in so doing, counteracts its effect and play a role in lifecycle of a
CC cell. The protein is useful for identifying agents that modulate the
CC binding of TRF1 to its DNA binding site, for identifying agents that
CC modulate the effect of tankyrase on TRF1 in the nucleus of a cell, for
CC identifying the agents that modulate telomere length and for identifying
CC agents that modulate the tankyrase-dependent ADP-ribosylation of TRF1 in
CC the nucleus of a cell. An agent that inhibits ADP-ribosylation of TRF1
CC would hinder telomere lengthening and so is useful in the treatment of
CC cancer. A modulator which promotes ADP ribosylation of TRF1 would enhance
CC telomere lengthening and so could be useful for extending the lifetime of
CC the cell, especially self-renewing cells such as bone marrow cells,
CC peripheral blood, T and B cells. Tankyrases are also useful for
CC developing drugs that can counteract the telomere shortening associated
CC with aging and certain diseases such as ataxia telangiectasia. The
CC sequence presented is the human tankyrase

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 1; Page 118-121; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

```
CC   factor-1) binding protein. This was isolated using a two-hybrid screen
CC   with TRF1. Tankyrase is involved in regulation of telomere length through
CC   TRF1 and may directly modulate the effect of TRF1. Recombinant tankyrase,
CC   or its fragments are used to identify specific modulators which are
CC   potential drugs for countering telomere shortening associated with aging
CC   (e.g. atrophy of skin, macular degeneration or atherosclerosis) or
CC   diseases like ataxia telangiectasia. They are also used to raise specific
CC   antibodies (used as immunoassay reagents and as modulators of tankyrase
CC   activity) and in rational drug design

XX
PT   Novel mammalian Tankyrase II polypeptide and the polynucleotide encoding
PT   the polypeptide useful for modulating or maintaining telomere length,
PT   replicative capacity, apoptosis, chromosome packing or gene expression.
XX
PS   Claim 4; Fig 5; 52pp; English.
XX
CC   The present sequence is a version of the human tankyrase I protein
CC   sequence. The invention relates to the isoaltion of the protein and
CC   coding sequences of human tankyrase II. This protein is thought to be
CC   involved in signal transduction in the cell, and to have binding activity
CC   for other telomere-associated proteins. It is possible that it plays a
CC   role in the regulation of telomere length, thus affecting the replicative
CC   ability of the cell. The protein is useful for ribosylating target
CC   proteins, for determining tankyrase II binding activity in a sample, and
CC   for modulating telomere length in a cell

PT   Diagnosing colon cancer in a subject comprises identifying colon cancer-
PT   associated polypeptides as antigens that elicit immune response in colon
PT   cancer.
XX
PS   Example 1; Page 118-121; 122pp; English.
XX
CC   The invention relates to a method for diagnosing colon cancer in a
CC   subject which comprises identifying colon cancer-associated polypeptides
CC   as antigens that elicit immune response in colon cancer. The method is
CC   useful for diagnosing, determining onset, progression, or regression of
CC   colon cancer in a subject, or for selecting a course of treatment of a
CC   subject having or suspected of having colon cancer. The colon cancer-
CC   associated polypeptides are useful as markers for diagnosing colon
CC   cancer, and for following the course of treatment of colon cancer. The
CC   present sequence is human colon cancer-associated polypeptide

PT   New insulin signaling protein SPANK, useful for reducing body mass,
PT   glucose intolerance or insulin resistance and for preventing or treating
PT   obesity-related and muscle-related diseases.
XX
PS   Claim 3; Fig 3; 65pp; English.
XX
CC   This sequence represents human SPANK. The SPANK protein comprises 3
CC   domains: (a) a SAM (sterile alpha motif) domain; (b) a PARP (poly
CC   adenosine diphosphate-ribose polymerase) catalytic domain; and (c) an ANK
CC   domain composed of ankyrin repeats. SPANK is a cytosolic protein which
CC   can poly(ADP-ribosyl)ate itself. SPANK binds insulin-responsive
CC   aminopeptidase (IRAP) and modulates translocation of GLUT4 in the
CC   perinuclear region of adipocytes. It is an effector in the insulin
CC   signalling pathway in eukaryotic cells. SPANK is useful for reducing body
CC   mass, reducing glucose intolerance or insulin resistance, for preventing
CC   or treating obesity-related diseases or disorders, such as obesity,
CC   cardiac insufficiency, coronary insufficiency, stroke, hypertension,
CC   atheromatous disease, atherosclerosis, high blood pressure, non-insulin
CC   dependent diabetes, hyperlipidaemia, hyperuricemia and Syndrome X and is
CC   also useful for preventing or treating muscle-related diseases or
CC   disorders, such as muscular dystrophy, muscle atrophy and muscle fatigue.
CC   Antibodies immunospecific for SPANK are useful for detecting the presence
CC   of SPANK polypeptide in a biological sample
```

```
CC   sequence represents the tankyrase H isoform 1, Taho E/A dC, which
CC   contains a Glu to Ala mutation and has a truncated C-terminal containing
CC   a 2 amino acid insertion described in the disclosure of the invention

PT   New candidate effector for the Grb7 family of signaling proteins, and
PT   specific antibody, useful for detection and treatment of cancer.
XX
PS   Claim 9; Fig 1; 24pp; English.
XX
CC   The present sequence represents a novel candidate effector for the Grb7
CC   family of signalling proteins, termed 2.2412. The sequence is predicted
CC   from a partial cDNA (see AAX25366). 2.2412 mRNA transcripts (7 kb) were
CC   detected in all tissues examined with the exception of kidney. Expression
CC   was particularly high in skeletal muscle and placenta. Analysis of the
CC   sequence revealed significant homology to a large number of proteins
CC   containing ankyrin-like repeats. The 2.2412 gene was localised to between
CC   chromosome 10q23.2 and proximal 10q23.32. Deletions in the 10q22-25
CC   region have been detected in human breast, prostate, renal, small cell
CC   lung and endometrial carcinomas, glioblastoma multiforme, melanoma and
CC   meningiomas. Detection of the protein encoded by the 2.2412 cDNA in a
CC   sample should provide a useful tumour marker and/or prognostic indicator
CC   for certain human cancers, in particular breast cancer and prostate
CC   cancer. Antagonism of the interaction between Grb7 family members and the
CC   encoded protein should provide a novel treatment stategy for human
CC   diseases exhibiting aberrant receptor tyrosine kinase signalling, such as
CC   cancer. Anti-Grb7 antibodies can be used in methods of detecting the
CC   presence of 2.2412 protein in a sample

PT New recombinant nucleic acid encoding a cell cycle protein, useful for
PT diagnosing and treating a cell cycle related disorder, e.g. cancer.
XX
PS Disclosure; Fig 16A-C; 90pp; English.
XX
CC This invention describes a novel recombinant nucleic acid encoding the
CC cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC invention have cytostatic and immunostimulant activity and can be used
CC for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC nucleic acid encoding the protein are useful for diagnosing and treating
CC a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC tumour cell. The methods are useful for screening for a bioactive agent
CC capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC agent capable of modulating a cell cycle protein tankyrase H or PARP
CC (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC inducing an immune response against the cell cycle proteins. This

PT   New tankyrase homolog protein (THP) polynucleotide and polypeptide useful
PT   in gene therapy, diagnosis and treatment or prevention of unregulated
PT   cell growth, such as cancer or tumor cell growth.
XX
PS   Claim 20; Page 50-54; 60pp; English.
XX
CC   The present sequence is human tankyrase homolog protein (THP). The THP
CC   polypeptides and polynucleotides of the invention are useful in gene
CC   therapy and for treating or preventing unregulated cell growth such as
CC   cancer or tumour (e.g. basal cell carcinoma). The nucleic acid molecules
CC   of the invention and their fragments are useful for restriction fragment
CC   length polymorphism (RFLP) associated with certain disorders, as well as
CC   for genetic mapping. Antisense oligonucleotides, or fragments of nucleic
CC   acid encoding THP are useful as diagnostic tools for probing the
CC   expression of Thp gene in various tissues. THP can be used as antigens
CC   for raising antibodies against them and in assays for identifying
CC   compounds that modulate their activity. They are used in the manufacture
CC   of a medicament directed towards cancers or tumours. THP are also useful
CC   for screening compounds in a variety of drugs screening techniques and as
CC   a research tool for identification, characterisation and purification of
CC   interacting, regulatory proteins

PT   Novel mammalian Tankyrase II polypeptide and the polynucleotide encoding
PT   the polypeptide useful for modulating or maintaining telomere length,
PT   replicative capacity, apoptosis, chromosome packing or gene expression.
XX
PS   Claim 4; Fig 4; 52pp; English.
XX
CC   The present sequence is a version of the human tankyrase II protein
CC   sequence. The protein is thought to be involved in signal transduction in
CC   the cell, and to have binding activity for other telomere-associated
CC   proteins. It is possible that it plays a role in the regulation of
CC   telomere length, thus affecting the replicative ability of the cell. The
CC   protein is useful for ribosylating target proteins, for determining
CC   tankyrase II binding activity in a sample, and for modulating telomere
CC   length in a cell

PT   New recombinant nucleic acid encoding a cell cycle protein, useful for
PT   diagnosing and treating a cell cycle related disorder, e.g. cancer.
XX
PS   Disclosure; Fig 16A-C; 90pp; English.
XX
CC   This invention describes a novel recombinant nucleic acid encoding the
CC   cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC   invention have cytostatic and immunostimulant activity and can be used
CC   for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC   nucleic acid encoding the protein are useful for diagnosing and treating
CC   a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC   tumour cell. The methods are useful for screening for a bioactive agent
CC   capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC   agent capable of modulating a cell cycle protein tankyrase H or PARP
CC   (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC   inducing an immune response against the cell cycle proteins. This
CC   sequence represents the tankyrase H isoform 1, TH-1 variant Taho F/L
CC   described in the disclosure of the invention

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Claim 2; Page 191-194; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 2; Page 173-176; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

XX
PT   New recombinant nucleic acid encoding a cell cycle protein, useful for
PT   diagnosing and treating a cell cycle related disorder, e.g. cancer.
XX
PS   Claim 14; Fig 4; 90pp; English.
XX
CC   This invention describes a novel recombinant nucleic acid encoding the
CC   cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC   invention have cytostatic and immunostimulant activity and can be used
CC   for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC   nucleic acid encoding the protein are useful for diagnosing and treating
CC   a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC   tumour cell. The methods are useful for screening for a bioactive agent
CC   capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC   agent capable of modulating a cell cycle protein tankyrase H or PARP
CC   (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC   inducing an immune response against the cell cycle proteins. This
CC   sequence represents the tankyrase H isoform 2, TaHo-2, isolated from
CC   clone K23 which is described in the disclosure of the invention

PT or preventing cell proliferation in cells, and for diagnosing, treating
PT or preventing cell cycle associated disorders such as cancer.
XX
PS Claim 22; Fig 4; 63pp; English.
XX
CC This sequence is the Tankyrase homologue isotype 2 (TaHo-2) protein of
CC the invention. The invention also relates to the TaHo-2 protein. The TaHo
CC proteins are useful for inducing or preventing cell proliferation in
CC cells, and in the study or treatment of conditions mediated by the cell
CC cycle proteins, such as to diagnose, treat or prevent cell cycle
CC associated disorders, preferably cancer. The TaHo coding sequences are
CC useful as hybridisation probes, in chromosome and gene mapping and in the
CC generation of anti-sense DNA and RNA. The coding sequences are also
CC useful for the preparation of TaHo, for generating either transgenic
CC animals or knock out animals which, in turn, are useful in a development
CC and screening of therapeutically useful agents, in gene therapy, as
CC vaccine, and for construction of hybridisation probes for mapping the
CC gene which encodes TaHo and for the genetic analysis of individuals with
CC genetic disorders. The TaHo proteins, and their coding sequences are
CC useful in screening assays

PT   New tankyrase2 polypeptides, useful for treating conditions mediated by
PT   poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT   inflammatory and autoimmune disorders.
XX
PS   Disclosure; Page 109-113; 242pp; English.
XX
CC   The present invention provides the protein and coding sequence for the
CC   human tankyrase2 protein. This is found in two different versions,
CC   designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC   ribosylation activity and is involved in the modification of TRF1, which
CC   is a telomere-specific binding protein. The regulation of telomere
CC   length, in which TRF1 has a role, is linked to ageing and cancer. The
CC   sequences are useful in the treatment of cancers and inflammatory
CC   disorders

CC   ABZ12066) or their mature protein coding portion, active domain coding
CC   protein or complementary sequences. The polynucleotides are useful for
CC   identifying expressed genes or for physical mapping of human genome. The
CC   encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight
CC   markers, as a food supplement, for generating antibodies, in medical
CC   imaging, screening and diagnostic assays and for treating cell-
CC   proliferative disorders (cancer), neurodegenerative diseases (Parkinson's
CC   or Alzheimer's disease), autoimmune diseases (multiple sclerosis,
CC   diabetes, lupus) genetic disorders, myeloid or lymphoid disorders,
CC   platelet or coagulation disorders, wound, burns, incision, ulcers, liver
CC   or lung fibrosis, infections (bacterial, viral, fungal, parasitic),
CC   arthritis, etc. Note: The sequence data for this patent did not form part
CC   of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PS   Example 1; Page 162-1665; 242pp; English.
XX
CC   The present invention provides the protein and coding sequence for the
CC   human tankyrase2 protein. This is found in two different versions,
CC   designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC   ribosylation activity and is involved in the modification of TRF1, which
CC   is a telomere-specific binding protein. The regulation of telomere
CC   length, in which TRF1 has a role, is linked to ageing and cancer. The
CC   sequences are useful in the treatment of cancers and inflammatory
CC   disorders

PT New recombinant nucleic acid encoding a cell cycle protein, useful for
PT diagnosing and treating a cell cycle related disorder, e.g. cancer.
XX
PS Claim 14; Fig 3; 90pp; English.
XX
CC This invention describes a novel recombinant nucleic acid encoding the
CC cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC invention have cytostatic and immunostimulant activity and can be used
CC for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC nucleic acid encoding the protein are useful for diagnosing and treating
CC a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC tumour cell. The methods are useful for screening for a bioactive agent
CC capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC agent capable of modulating a cell cycle protein tankyrase H or PARP
CC (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC inducing an immune response against the cell cycle proteins. This
CC sequence represents the tankyrase H isoform 1, TaHo-1, isolated from
CC clone TH-1 which is described in the disclosure of the invention

PT   New recombinant nucleic acid encoding a cell cycle protein, useful for
PT   diagnosing and treating a cell cycle related disorder, e.g. cancer.
XX
PS   Disclosure; Fig 16A-C; 90pp; English.
XX
CC   This invention describes a novel recombinant nucleic acid encoding the
CC   cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC   invention have cytostatic and immunostimulant activity and can be used
CC   for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC   nucleic acid encoding the protein are useful for diagnosing and treating
CC   a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC   tumour cell. The methods are useful for screening for a bioactive agent
CC   capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC   agent capable of modulating a cell cycle protein tankyrase H or PARP
CC   (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC   inducing an immune response against the cell cycle proteins. This
CC   sequence represents tankyrase H isoform 1, TH-1, described in the
CC   disclosure of the invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT Novel recombinant cell cycle polypeptide, tankyrase H useful for inducing
PT or preventing cell proliferation in cells, and for diagnosing, treating
PT or preventing cell cycle associated disorders such as cancer.
XX
PS Claim 22; Fig 3; 63pp; English.
XX
CC This sequence is the Tankyrase homologue isotype 1 (TaHo-1) protein of
CC the invention. The invention also relates to the TaHo-2 protein. The TaHo
CC proteins are useful for inducing or preventing cell proliferation in
CC cells, and in the study or treatment of conditions mediated by the cell
CC cycle proteins, such as to diagnose, treat or prevent cell cycle
CC associated disorders, preferably cancer. The TaHo coding sequences are
CC useful as hybridisation probes, in chromosome and gene mapping and in the
CC generation of anti-sense DNA and RNA. The coding sequences are also
CC useful for the preparation of TaHo, for generating either transgenic
CC animals or knock out animals which, in turn, are useful in a development
CC and screening of therapeutically useful agents, in gene therapy, as

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 3
AX057579
LOCUS AX057579 6123 bp DNA linear PAT 17-JAN-2001
DEFINITION Sequence 2 from Patent WO0077225.
ACCESSION AX057579
VERSION AX057579.1 GI:12310301
KEYWORDS .
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE 1
AUTHORS Chi,N.W. and Lodish,H.F.
TITLE A novel insulin signaling molecule
JOURNAL Patent: WO 0077225-A 2 21-DEC-2000;
WHITEHEAD INSTITUTE FOR BIOMEDICAL RESEARCH (US) ; THE GENERAL
HOSPITAL CORPORATION (US)
FEATURES Location/Qualifiers
source 1. .6123

RESULT 5
AX062247
LOCUS AX062247 4406 bp DNA linear PAT 24-JAN-2001
DEFINITION Sequence 106 from Patent WO0100849.
ACCESSION AX062247
VERSION AX062247.1 GI:12540148
KEYWORDS .
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

```

LOCUS       AX076214               3498 bp    DNA     linear   PAT 06-FEB-2001
DEFINITION  Sequence 4 from Patent WO0104326.
ACCESSION   AX076214
VERSION     AX076214.1  GI:12710839
KEYWORDS    .
SOURCE      Homo sapiens (human)
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE   1
  AUTHORS   Berthelsen,J., Toma,S. and Isacchi,A.
  TITLE     Tankyrase homolog protein (thp), nucleic acids, and methods related
            to the same
  JOURNAL   Patent: WO 0104326-A 4 18-JAN-2001;
            PHARMACIA & UPJOHN S.p.A. (IT)

  TITLE     Direct Submission
  JOURNAL   Submitted (09-JUL-2002) 1, D-85764 Neuherberg, GERMANY
COMMENT     Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
            Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
            sequenced by Qiagen (Hilden/Germany) within the cDNA sequencing
            consortium of the German Genome Project.
            This clone (DKFZp667A1222) is available at the RZPD in Berlin.
            Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
            Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de Further
            information about the clone and the sequencing project is available
            at http://mips.gsf.de/proj/cDNA/.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAK Plate: 126 Row: p Column: 6
            This clone was selected for full length sequencing because it
            passed the following selection criteria: Similarity but not
            identity to protein.

                     in signalling and nuclear proteins. In EPH-related
                     tyrosine kinases, appears to mediate cell-cell initiated
                     signal transduction via the binding of SH2-containing
                     proteins to a conserved tyrosine that is phosphorylated.
                     In many cases mediates homodimerisation"
                     /db_xref="CDD:smart00454"
     misc_feature    3424. .3903
                     /note="PARP; Region: Poly(ADP-ribose) polymerase catalytic
                     domain. Poly(ADP-ribose) polymerase catalyses the covalent
                     attachment of ADP-ribose units from NAD+ to itself and to
                     a limited number of other DNA binding proteins, which
                     decreases their affinity for DNA. Poly(ADP-ribose)
                     polymerase is a regulatory component induced by DNA
                     damage. The carboxyl-terminal region is the most highly
                     conserved region of the protein. Experiments have shown
                     that a carboxyl 40 kDa fragment is still catalytically
                     active"

RESULT 34
AY142108
LOCUS AY142108 3804 bp mRNA linear VRT 30-MAY-2003
DEFINITION Gallus gallus tankyrase 1 mRNA, complete cds.
ACCESSION AY142108
VERSION AY142108.1 GI:27461954
KEYWORDS .
SOURCE Gallus gallus (chicken)
ORGANISM Gallus gallus
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Archosauria; Aves; Neognathae; Galliformes; Phasianidae; Phasianinae; Gallus.
REFERENCE 1 (bases 1 to 3804)
AUTHORS De Rycker,M., Venkatesan,R.N., Wei,C. and Price,C.M.
TITLE Vertebrate tankyrase domain structure and sterile alpha motif (SAM)-mediated multimerization
JOURNAL Biochem. J. 372 (Pt 1), 87-96 (2003)
MEDLINE 22615216
PUBMED 12589701

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 2
AK048860

LOCUS	AK048860 3417 bp mRNA linear HTC 20-SEP-2003
DEFINITION	Mus musculus 0 day neonate cerebellum cDNA, RIKEN full-length enriched library, clone:C230076L23 product:TRF1-INTERACTING ANKYRIN-RELATED ADP-RIBOSE POLYMERASE homolog [Homo sapiens], full insert sequence.
ACCESSION	AK048860
VERSION	AK048860.1 GI:26339607
KEYWORDS	HTC; CAP trapper.
SOURCE	Mus musculus (house mouse)
ORGANISM	Mus musculus Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus.
REFERENCE	1
AUTHORS	Carninci,P. and Hayashizaki,Y.
TITLE	High-efficiency full-length cDNA cloning

                     /clone_lib="L11SNU354"
                     /note="Organ: Liver; Vector: pCNS-D2; Site_1: EcoRI;
                     Site_2: NotI; The poly (A)+ RNA was dephosphorylated with
                     bacterial alkaline phosphatase (BAP) and then decapped
                     with tabacco acid pyrophosphatase (TAP). The decapped
                     intact mRNA was ligated with DNA-RNA linker including
                     EcoRI site by treatment of T4 RNA ligase and the first
                     strand cDNA was synthesized from oligo dT-selected mRNA by
                     priming with dT-tailed vector. The dT-tailed vector was
                     adjusted to have about 60nt. The cDNA vector was
                     circularized with E. coli DNA ligase after digestion of
                     EcoRI which site is also included in vector. An RNA strand
                     converted to a DNA strand by Okayama-Berg method. The
                     obtained cDNA vectors were used for transformation of
                     competent cells E. coli Top10F' by electroporation method.
                     The cDNA libraries constructed by this method are
                     full-length enriched cDNA library."

```

/note="Organ: Eye; Vector: pYX- Asc; Site_1: EcoR I; Site_2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarose gel.First strand cDNA synthesis was primed with oligo-dT primer containing a Not I site .Double strand cDNA was size selected according to mRNA size fraction ,ligated with EcoR I adaptor , digested with NotI and then cloned directionally into pYX-Asc vector . The library tag sequence located between the Not I site and the polyA tail is TTATTGAAGT. This library was created for the University Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMH)."

This sequence was derived from the FAPESP/LICR Human Cancer Genome Project. This entry can be seen in the following URL
(http://www.ludwig.org.br/scripts/gethtml2.pl?t1=&t2=RC1-BT0623-120200-011-d04&t3=2000-02-12&t4=1)
Seq primer: puc 18 forward
High quality sequence start: 4
High quality sequence stop: 648.

FEATURES Location/Qualifiers
source 1. .648
/organism="Homo sapiens"
/mol_type="mRNA"
/db_xref="taxon:9606"
/dev_stage="Adult"
/clone_lib="BT0623"
/note="Organ: breast; Vector: puc18; Site_1: SmaI; Site_2: SmaI; A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196,716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions."
